

Case Study

Marsh Gibbon CE School

“Children can have instant feedback on their work from others and they are able to share in their successes and praise.”

Miss Claire Jefferies recently acquired an AVerVision 150 for her classroom, as she thought it would be a great visual aid for displaying documents to her students. However, since she began using the visualiser, she has found that it can do much more for a classroom than just display documents, and for this reason it always stays connected to her computer and projector so that it's available for any need that may arise during a lesson.

Uses Miss Jefferies has found for her visualiser include demonstrations of how to complete class work; children can easily see the demonstration from their desk and they can be directed on where to look. It has proven useful in literacy lessons where children are able to put drawings in a sequence. Miss Jefferies is then able to add annotations and capture the image for further discussion in future lessons. The class has also used it in Drama lessons where they are asked to act out characters in stories on the camera as it records.

“It is a quick and effective way of getting the children's work onto a whiteboard or into a computer.”

The visualiser has become an essential tool in the Marsh Gibbon CE School classroom. Miss Claire Jefferies is familiar with other visualisers and when asked what advantage the AVerVision 150 holds over other visualisers, she said, “It is portable, easy to connect to the PC, easy to use and the gooseneck is ideal for swivelling around to take photographs and video. It is a useful tool for the modern classroom.”
